

JanSetu AI

AI-Powered Citizen Feedback & Development Intelligence Platform

"Turning Citizen Voices into Smarter Public Development"

JanSetu AI is a scalable, multilingual AI platform that collects citizen development requests through voice, text, and messaging platforms and converts them into actionable insights for policymakers.

Voice-based citizen feedback

Multilingual text processing

AI-powered request analysis

Development priority mapping

Data-driven policymaker recommendations

Team Name: NexGen | **Members:** [Ankita Anand], [Prashant Kumar Pandey], [Amisha Kumari]

HOW IT WORKS

Citizens submit requests via app, voice & chat

JanSetu AI Engine

Multilingual NLP + Priority Analysis

Government Dashboard

Priority hotspots & recommendations for policymakers

Illustrative concept — INDIA scale

The Problem

Fragmented Citizen Feedback

Struggling to consolidate feedback

Governments across India find it hard to bring citizen feedback into one system.

Fragmented request systems

Development requests are scattered across disconnected portals, calls & offices.

Misaligned public spending

Disconnected data can lead public investment away from real, urgent needs.

Unaddressed infrastructure gaps

Genuine local infrastructure needs remain unnoticed and unresolved.

Limited impact measurement

Hard to measure impact of large-scale digital public infrastructure initiatives.

Our Solution

JanSetu AI

WORKED EXAMPLE

“Village X needs a better road and healthcare facility.”

JanSetu AI analyzes:

Number of similar requests

Population / demographic context

Existing infrastructure

Relevant investment plans

Output

“High-priority infrastructure requirement detected.”

Helps policymakers identify demand hotspots and prioritize development projects.

Technology Stack

Proposed implementation for the prototype

ARCHITECTURE FLOW

Prototype implementation — not yet integrated with any live government system or API.

Frontend

- React.js

Backend

- Python + FastAPI

AI Layer

- Multilingual NLP
- Text classification
- LLM-based analysis
- Priority scoring

Database

- PostgreSQL / Supabase

Visualization

- Interactive maps
- Analytics dashboard

From Citizen Voice → Data → Action

Every Citizen Voice Matters

AI-Powered Decision Support

Identify Development Hotspots

Better Infrastructure
Prioritization

Scalable Across India

“JanSetu AI transforms fragmented citizen feedback into actionable intelligence, helping policymakers make more informed development decisions.”

Built by NexGen

“Technology that creates real-world impact.”
